SQL ASSIGNMENT 6

Subject: Database Management Systems (SQL) **Topic:** Sorting & Limiting Results (ORDER BY & LIMIT) **Status:** Completed

QUESTION 1

Display all products from a `products` table sorted by price in ascending order (lowest to highest price).

```sql
SELECT * FROM products ORDER BY price ASC;
```

QUESTION 2

Modify the previous query to show the top 5 most expensive products using `ORDER BY` with `DESC` and `LIMIT`.

```sql
SELECT * FROM products ORDER BY price DESC LIMIT 5;
```

QUESTION 3

Given a `movies` table with columns `title`, `release_year`, and `rating`, list all movies sorted first by `release_year` descending, then by `rating` descending.

```sql
SELECT title, release_year, rating FROM movies ORDER BY release_year DESC, rating DESC;
```

QUESTION 4

Display the first 10 restaurants from a `restaurants` table, sorted alphabetically by name (A-Z listing).

```sql
SELECT * FROM restaurants ORDER BY name ASC LIMIT 10;
```

QUESTION 5

Display the top 3 trending songs based on `play_count` (highest first). If two songs tie on play count, the more recently added song (`created_at`) comes first.

```sql
SELECT * FROM songs ORDER BY play_count DESC, created_at DESC LIMIT 3;
```
