SQL Assignment Submission

Subject: Database Management Systems (SQL) **Topic:** Table Creation & Data Filtering **Status:** Completed

QUESTION 1

Create a table called **Restaurants** with columns: `id`, `name`, `cuisine`, `rating`, and `city`. Insert at least 5 sample records.

```
CREATE TABLE Restaurants ( id INTEGER PRIMARY KEY, name TEXT, cuisine TEXT, rating REAL, city TEXT ); INSERT INTO Restaurants (id, name, cuisine, rating, city) VALUES (1, 'Swagat Restaurant', 'Gujarati', 4.3, 'Ahmedabad'), (2, 'Swadisht Bites', 'North Indian', 3.9, 'Surat'), (3, 'Little Italy', 'Italian', 4.5, 'Ahmedabad'), (4, 'Dakshin Express', 'South Indian', 4.2, 'Vadodara'), (5, 'Dragon House', 'Chinese', 3.7, 'Surat');
```

QUESTION 2

Find all restaurants with a rating greater than 4.0 and located in either 'Ahmedabad' or 'Surat'.

```
SELECT * FROM Restaurants WHERE rating > 4.0 AND city IN ('Ahmedabad', 'Surat');
```

QUESTION 3

Select all restaurants whose names start with 'Swa' using the `LIKE` operator.

```
SELECT * FROM Restaurants WHERE name LIKE 'Swa%';
```

QUESTION 4

Find all restaurants with a rating between 3.5 and 4.5 (inclusive) using the `BETWEEN` keyword.

```
SELECT * FROM Restaurants WHERE rating BETWEEN 3.5 AND 4.5;
```

QUESTION 5

Find all restaurants whose cuisine is either 'Chinese', 'Italian', or 'South Indian' using the `IN` operator.

```
SELECT * FROM Restaurants WHERE cuisine IN ('Chinese', 'Italian', 'South Indian');
```
